

**Supplementary Fig. 2.** Involvement of Mcl-1 in combined treatment with metoclopramide and platinum-based drugs-induced apoptosis. AMC-HN4 cells were treated with 0.5 mM metoclopramide or/and 30 μM platinum-based drugs (cisplatin and oxaliplatin) for 24 h. The sub-G1 population (A) and protein expression (B) were determined using flow cytometry and western blotting, respectively. \* $p < 0.01$  compared to control.
